

Week 7 Project / Presentation Notes

Marriott International | Updated KPI 3 and KPI 4 Data Review

Prepared as an updated companion to Cole Kostrzewa's Week 7 project notes. Reporting window: FY2021–FY2025.

DATA STATUS: Working research compilation. Historical growth figures and disclosure references should be checked against original Marriott filings before final submission.

Selected KPI Framework

KPI	Purpose	Type
3. Digital Booking Adoption	Customer adoption of Marriott digital booking channels	Leading
4. Revenue per Available Room (RevPAR)	Hotel room revenue productivity and performance	Lagging

KPI 3 — Digital Booking Adoption

KPI Rationale

Measures adoption of Marriott's digital booking channels, including its website and mobile app. Digital room-night share is the preferred measure because it captures the proportion of room nights booked digitally. Digital room-night volume and its year-over-year growth are useful supporting measures, but they are not interchangeable with adoption share.

Updated Data Availability

Period	Available observation	Measure / comparability	Source to confirm
FY2021	No comparable annual share established	Missing	2021 annual report / investor materials
FY2022	Digital room nights increased 27% YoY	Annual volume growth; not adoption share	Marriott 2022 annual report
Q1 2023	Digital room nights increased 17% YoY	Quarterly volume growth; not comparable to annual observations	Marriott Q1 2023 earnings commentary

FY2023	~211.4M digital room nights (calculated from 2024 volume and +5% growth)	Estimated annual volume; NOT disclosed adoption share	Derived from FY2024 investor presentation
FY2024	222M digital room nights; 38% of systemwide room nights; +5% YoY digital room-night growth	Annual volume, annual share, annual growth	Marriott Own the Future presentation (2025)
FY2025	No comparable annual digital booking share established	Missing	2025 annual report / investor materials

Estimation method: 2023 digital room-night volume $\approx 222 \text{ million} \div 1.05 = 211.4 \text{ million}$. This is an estimate contingent on the reported 2024 growth percentage and its rounding. It must be labeled “est.” in the dashboard.

Interpretation and Inflection Point

The available disclosures show substantial use of digital booking channels, but they do not establish a five-year adoption-share series or a defensible year when the share accelerated. The 2024 observation of 38% is a usable annual adoption-share data point. The 2022 and Q1 2023 figures describe volume growth, not share. Do not plot all these figures on one adoption-percentage line or label 2024 a confirmed adoption inflection.

KPI 4 — Revenue per Available Room (RevPAR)

KPI Rationale

RevPAR measures room revenue per available room and combines occupancy and average daily room rate effects. It is a lagging measure of hotel revenue productivity. Changes may reflect travel demand, pricing, mix and other factors beyond digital transformation.

Updated Annual Growth Series

Fiscal year	Worldwide comparable RevPAR YoY growth	Status / note
2021	Baseline year	Annual RevPAR dollar value still needed
2022	+51.0%	Historical growth figure from prior research; confirm exact geographic/comparable basis
2023	+14.9%	Historical growth figure

		from prior research; confirm exact geographic/comparable basis
2024	+4.3%	From Member B's notes; confirm in FY2024 annual report
2025	+2.0%	From Member B's notes; confirm in FY2025 results

Important: The series above shows annual percentage growth, not RevPAR in USD. For the selected KPI, source FY2021–FY2025 worldwide systemwide RevPAR dollar values and use growth rates in the tooltip or inflection annotations. Check that all observations use the same reporting scope and comparable-property methodology.

Updated Inflection Point

FY2023 — Growth normalization. The working series indicates RevPAR growth decelerated from +51.0% in 2022 to +14.9% in 2023, followed by +4.3% in 2024 and +2.0% in 2025. The likely explanation is the moderation of the unusually strong post-pandemic recovery, but this causal statement requires confirmation against Marriott's management commentary.

Combined KPI 3 + KPI 4 Interpretation

Marriott reported 222 million digital room nights in FY2024, representing 38% of systemwide room nights, while worldwide RevPAR growth was +4.3%. RevPAR growth remained positive at +2.0% in FY2025. These observations indicate substantial digital channel use alongside positive room revenue growth, but do not demonstrate that digital adoption caused the RevPAR results. A causal or timing claim would require comparable annual digital adoption shares and additional supporting evidence.

The earlier “12–24 months” combined inflection statement is best treated as a hypothesis to test, not an observed inflection date. In the dashboard, annotate KPI 4 at FY2023 if confirmed, and defer a KPI 3 annotation until a genuine time-series change is documented.

Dashboard Handoff / Remaining Research

Item	Needed before final dashboard
KPI 3	Comparable annual digital booking share for at least four fiscal years, or explicitly document the limited coverage
KPI 4	Worldwide systemwide RevPAR USD values for FY2021–FY2025 on a consistent basis
Annotations	Specific period, measured change, likely

	cause and dated primary source
Attribution	Exact annual report, earnings release or investor deck URL/page for each figure

Source Register (verification checklist)

- Marriott 2022 Annual Report — digital room-night growth; RevPAR historical results.
- Marriott Q1 2023 earnings commentary — Q1 digital room-night growth.
- Marriott FY2023 earnings release / annual report — annual worldwide comparable RevPAR growth.
- Marriott FY2024 Annual Report — worldwide RevPAR growth.
- Marriott “Own the Future” investor presentation (2025) — FY2024 digital room nights, share and growth.
- Marriott FY2025 earnings release (February 2026) — worldwide RevPAR growth.
